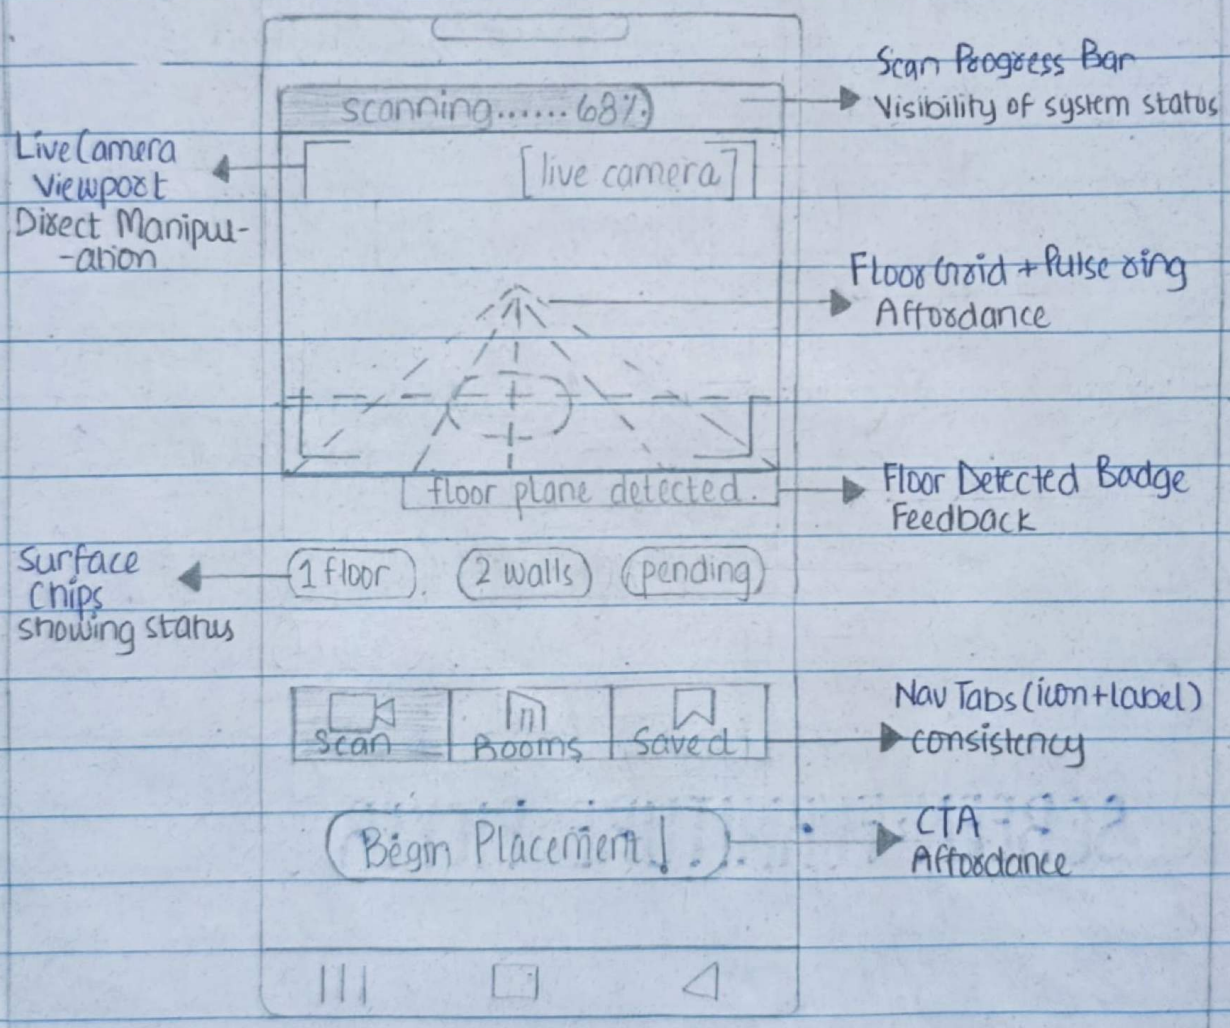
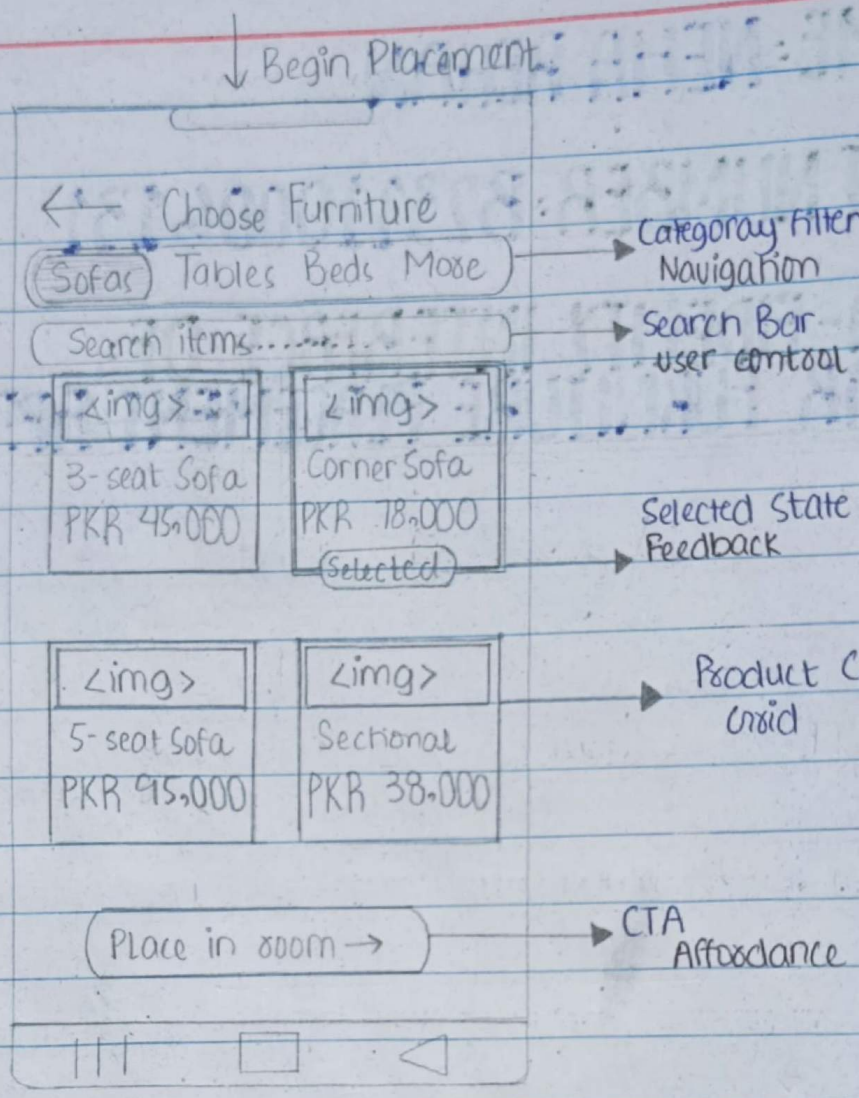
NAME: NEHA REHAN

SEAT NUMBER: B231100061 31

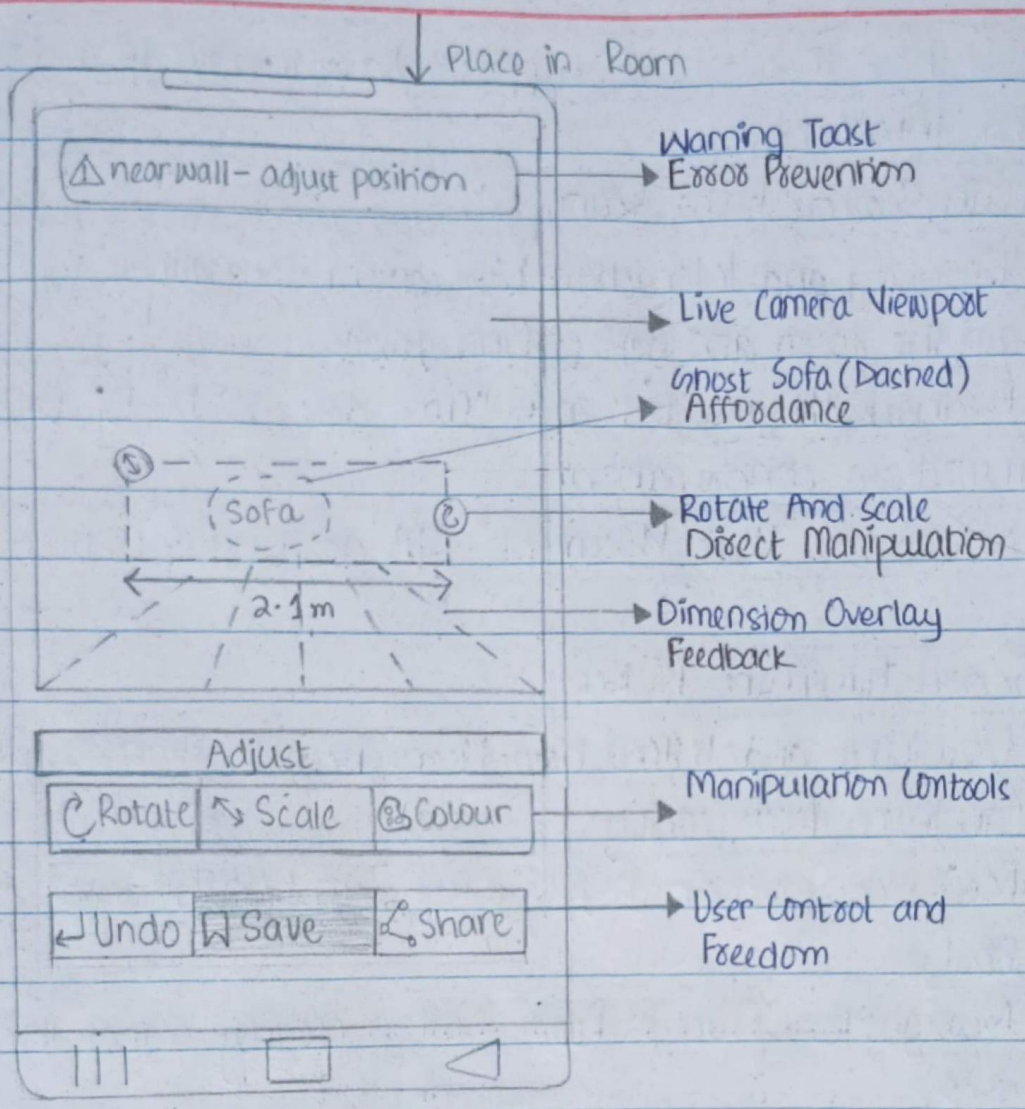
LOW-FIDELITY INTERFACE OF:
"AR FURNITURE PLACEMENT APP"



MAIN SCREEN: ROOM SCAN



SCREEN: FURNITURE PICKER



SCREEN: PLACE AND ADJUST

* How these three Screens support Usability, Feedback, Navigation and Interaction.

1 Main Screen: Room Scan.

- Usability and Interaction: Live camera feed allows Users to scan the room and detect floor / walls.
- Feedback: Progress bar and "floor detected" badge provide immediate confirmation.
- Navigation: "Begin Placement" CTA clearly guides users.

2 Screen: Furniture Picker:

- Usability and Interaction: Users browse, search, and filter furniture items easily.
- Feedback: Selection highlighted with border and "selected" badge.
- Navigation: "Place in Room" button clearly signals the next step.

3 Screen: Place and Adjust.

- Usability and Interaction: Users can rotate, scale, recolor, and position furniture.
- Feedback: Ghost sofa overlay and measurement indicators give visual confirmation.
- Navigation: Undo / Save / Share option allow reversible actions and forward progression.

HCI PRINCIPLES APPLIED:

1 Feedback: Progress bar, floor detection, selection highlights.

2 Affordance: Floor grid, pulse ring, ghost sofa indicate interactive areas.

3 Consistency: Button placement, layout, and tab styles are the same across screens.

4 User Control and Freedom: Undo, adjustable placement, save/share options allow reversible actions.

5 Recognition over Recall: Product images, labels, and prices reduce memory load.

6 Error Prevention: Warnings for invalid placement near walls or obstacles.
